

Fully Sealed input Devices for Extreme Environments

Built to withstand the harsh environments encountered on the battlefield, on a ship, or in a factory, Keytouch products are known for their reliability in consequential situations. Fully sealed means that Keytouch input devices will operate virtually anywhere, and are designed to withstand extreme temperatures, chemical environments and areas where there is excessive moisture or precipitation present.

Gluing/Sealing

The glue dispensing robot ensures proper sealing, protecting fissures and transitions against fluids and particles. Fissures are also presented with a smoother appearance. Sealing can satisfy an IP degree of 68.

Gasket dispensing

The robot can dispense gaskets of various thicknesses, materials and qualities.
